

Comparison of MelaminPlusPad and PolyPlusPad

MelaminPlusPad

PolyPlusPad

general information about the pads	MelaminPlusPads and PolyPlusPads are cleaning pads that efficiently remove dirt from floor coverings. Both pad types are non-abrasive, i.e. they do not change the surface of the floor covering. MelaminPlusPads and PolyPlusPads are not scouring pads or diamond pads that remove the floor covering itself and roughen, grind and/or polish it.	
pad type	The MelaminPlusPads consist of a special composition of melamine resin foam and additives and thus enable excellent mechanical cleaning performance.	PolyPlusPads are special textile cleaning pads for machine cleaning, with a long service life and very good mechanical cleaning performance on various floor coverings.
function principle	The melamine resin foam of the MelaminPlusPad shears the dirt off the surface of the floor covering extremely effectively. This creates an excellent cleaning result, the sharp-edged melamine resin foam is used up. The dirt then remains in the dirty water and can be vacuumed off.	The fine polyester fibers have a high mechanical cleaning effect and remove dirt from the surface. The dirt does not attach itself to the fibres, remains in the dirt water and can therefore be vacuumed up with the scrubbing machine. There is no "soiling" of the fiber as with a pure microfiber pad.
general application	for heavily soiled floor coverings; maximum dirt removal therefore particularly recommended for basic cleaning and highly effective maintenance cleaning	for medium soiled floor coverings; good dirt removal therefore recommended in particular for maintaining a good level of cleaning, i.e. for maintenance cleaning of floor coverings
type of floorings	especially for mineral floor coverings such as: porcelain stoneware, cast stone, also PVC/Vinyl by trained specialists also for the basic cleaning of linoleum and rubber, sensitive natural stone such as marble all surfaces that have a higher degree of hardness than the MelaminPlusPad of 4° can usually be cleaned without any problems.	suitable for all floor coverings, also for extremely sensitive and coated floor coverings Lino, rubber and marble. For permanent cleaning - without restrictions. Very well suited for heavily structured surfaces such as "safety tiles" due to the floor height of 8-10 mm.
service life/consumption	depending on - machine contact pressure - roughness of the floor covering - amount of water used the MelaminPlusPads are used up. More stable and durable compared to pure melamine resin foam	The PolyPlusPad® can usually remain mounted on the driver plate until the fine fiber is completely worn out. The longevity results from the high-quality polyester and carrier materials as well as the high-quality seams. The heavily used edge area is sewn with binding tap and quilted seam.
E.g. in German supermarkets (1500sqm daily cleaning 6* per week)	approx. 3 weeks service life	approx. 3 months lifespan high quality seams
	suitable for all common acidic and alkaline basic and maintenance cleaners	
advantages	* maximum dirt removal * Significantly longer service life compared to pure melamine resin foam * Chemicals and basic cleaning can be avoided	* optimized for dirt removal and durability * machine washable up to 60°C * extremely long service life
