

haid-tec PolyPlusPad®

Great result, long service life!

PolyPlusPad® is a pad with high mechanical cleaning performance and long service life on various mineral and elastic floor coverings, such as porcelain stoneware, natural stone, structured tiles, vinyl, linoleum, rubber studded flooring, etc.

Functionality

The fine polyester fibers have a high mechanical cleaning effect and remove dirt from the surface. The dirt does not stick to the fiber. The fiber does not become dirty like with a pure microfiber pad.

The PolyPlusPad® can generally remain mounted on the drive plate until the fine fibers are completely worn out. The pad can be washed in the washing machine at up to 60°C. The longevity is the result of the high-quality polyester and backing materials as well as the high-quality workmanship. The edge area, which is subject to heavy wear, is sewn with edging and quilting.

Benefits and performance

- Use for maintenance cleaning
- Long service life of up to 100,000 sqm and more per pad
- With robust back material, sewn with quilted seam
- Can be used with all common cleaning agents
- Machine washable at 60°
- Fine polyester fibres with high cleaning effect, pile height approx. 8-10mm

EFFECTIVE ON NUMEROUS FLOORING TYPES

For daily maintenance cleaning and cleaning of rough surfaces.

IMMEDIATE COST SAVINGS

Convincing cleaning results with minimal effort. Very long service life

ENVIRONMENTALLY FRIENDLY

Long service life and economical use of cleaning agents. Easy cleaning in the washing machine.
